## **ARCOM Submittal Changes Narrative**

The owner decided to make some changes to the interior layout of the addition resulting in window changes on the exterior affecting the north, south and east elevations. These changes include a large corner window at the new proposed stair and also reduce the amount of second floor bedroom windows at the north and south elevations.

These changes affect only the interior layout and location of proposed windows and doesn't affect the square footage, lot coverage or cubic content.

Proposed finishes are still matching the existing house color and materials.
